

**DISPLAY DEVICE INCLUDING A SPATIAL LIGHT  
MODULATOR WITH PLURAL IMAGE REGIONS**

5

**ABSTRACT**

A display device includes a spatial light modulator and a light generator. The spatial light modulator may have an array of modulating elements with a plurality of image regions. The light generator may be configured to direct a different one of a plurality of substantially stationary light bands onto each of a 10 plurality of the image regions of the array of modulating elements.
